

Basic Calculator Project

This project is a simple web-based calculator developed by Vishwas Verma during an internship with Unified Mentor. The calculator performs basic arithmetic operations and features a clean, responsive design. It's built using HTML, CSS, and JavaScript, making it easy to run and modify.

Key Features:

- Supports addition, subtraction, multiplication, and division.
- Clear (CLR) button to reset the calculator display.
- Displays 'ERROR' for invalid operations.
- Stylish and responsive UI for a modern user experience.

How to Run:

1. Clone the repository from GitHub.
2. Open the 'index.html' file in a web browser.

Files Included:

- index.html: Structure of the calculator.
- styles.css: Styling rules for the calculator.
- index.js: JavaScript code for calculator logic.

Project Structure:

BasicCalculator/

index.html

styles.css

index.js

This document provides a concise overview of the Basic Calculator project, making it easier for reviewers to understand its purpose and implementation.
